OBJECTIVE

Software Developer with hands-on experience in backend development and production grade ETL pipelines using Python, SQL, PostgreSQL, MageAI, and DLT Hub. Experienced in designing scalable data integration solutions, API development, workflow automation, CDC-based incremental processing, SCD Type-2 versioning, and data validation. Passionate about backend engineering, data engineering, and AI-powered automation.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript
Data Engineering : ETL/ELT Pipelines, CDC (Change Data Capture), SCD Type 2, Incremental Loading, Batch Processing, Schema Evolution, Data Modeling (Star Schema, OLTP, OLAP)
Python Libraries: Pandas, NumPy, Pydantic
Databases: PostgreSQL, MongoDB
Backend & APIs: REST APIs, NestJS, JWT Authentication, API Integration, Socket.IO
Workflow & DevOps: MageAI, DLT Hub, Airflow, Docker, Git, GitHub Actions
AI & Automation: Agentic AI, LLM Workflows, Prompt Engineering, RAG, Vector Embeddings, Multi-Agent Systems
Methodologies and Tools: Agile, JIRA, Confluence and Sendgrid.

PROFESSIONAL EXPERIENCE

QTRAMS IT SOLUTIONS Hyderabad, IN
Software Developer *Feb 2025 - Present*

MIYO Health Platform: Miyo is a Mental health platform for managing student care, assessments, appointments, and reporting across schools and districts.

Environment: Python, SQL, PostgreSQL, MageAI, DLT Hub, Airflow, Pandas, Docker, REST APIs, MongoDB, NestJS, React, TypeORM

ETL & Data Pipeline Engineering

- Designed and maintained 10+ production grade ETL pipelines processing 50K+ records per week with 5K+ daily incremental updates across SFTP, API, Google Sheets, and internal sources.
- Built SFTP batch ingestion pipeline handling 20K+ records per week with CDC and SCD Type-2 versioning, tracked 5-10% net-new inserts, 4-10% updates, and 4-5% soft deletes per run.
- Implemented incremental loading via DLT Hub state management, eliminating full-table scans and reducing pipeline runtime.
- Applied SCD Type-2 change tracking in MongoDB for full data lineage, audit trails, and versioned records.
- Enforced data validation, field mapping, and business rules using Pydantic before persisting to PostgreSQL and MongoDB.
- Implemented error logging, retry mechanisms, bad-record tracking, and automated SendGrid alerting for pipeline failures.
- Automated scheduled and event-driven pipeline runs via GitHub Actions and MageAI orchestration.

API Integrations & Backend Development

- Built incremental ingestion pipelines for Workable (ATS) and HubSpot (CRM) using DLT Hub with PostgreSQL loading, schema evolution, and GitHub Actions scheduling.
- Developed Google Sheets ingestion pipelines with watermark-based tracking, automated validation, and referral synchronization.
- Built and maintained backend APIs for the MIYO platform across multiple districts; integrated GAIN ABS (Treatment Episode creation, assessment sync) and CareConnect.
- Collaborated with product, data, and QA teams in an Agile/JIRA workflow to deliver client-specific pipeline requirements.

AI & Analytics Engineering

- Worked on AI-powered analytics copilot converting natural language to SQL using LLM workflows and PostgreSQL, handled query generation, execution, and response pipeline end-to-end.
- Explored Agentic AI and multi-agent architectures hands-on with prompt engineering, RAG, vector embeddings, and tool/function calling.

PROJECTS

Messaging App

NestJS, React, PostgreSQL, Socket.IO

- Developed real-time bidirectional messaging using Socket.IO with secure JWT-based auth
- designed responsive React frontend and scalable NestJS/PostgreSQL backend.

https://github.com/manoj13196/Messaging_app

File Uploader & Dashboard App

NestJS, React, PostgreSQL, Supabase, Cloudinary

- Built a secure file management platform with role-based access control; integrated Cloudinary for uploads and Supabase for auth and backend storage.
- Designed scalable REST APIs with NestJS and PostgreSQL; built an admin dashboard using React for file and user-role management.
